

TOKEN SECURITY

Jefferson Bank requires Treasury Management customers that process ACH and/or Wire transactions to utilize a security token. For your convenience, the following options are available for token security and each user at your company may use:

- Symantec VIP Access Desktop
- Symantec VIP Access Mobile App

Symantec Validation & ID Protection (VIP) protects your online accounts and transactions. The VIP credential provides a dynamic security code that you can use in addition to your user name and password for safe and secure account access and transaction submission. Two options are available for you to select to utilize as a token. See the options below.

Symantec VIP Access Desktop

- Symantec Validation & ID Protection (VIP) Access is a free online security credential that you can download to your computer desktop (Windows or Mac) or as a mobile app.*
- How does VIP Access work?
 - » VIP Access helps protect your accounts and your identity by requiring a higher level of security when you conduct online transactions.
 - » The six-digit security code is required to authorize the processing of ACH/Wire transactions on the Online Banking System.
- How to Set Up Symantec VIP Access:
 - » Go to <https://vip.symantec.com> and download the appropriate version for your desktop (Windows/Mac) or mobile device application.
 - » Complete the installation.
 - » Send your Credential ID to Jefferson Bank in a secure message through Online Banking.

*Symantec Validation & ID Protection (VIP) is a third party software. Jefferson Bank is not responsible for the content or services they provide.
